

My name is Olivia Faulks, I am 17 and I attend Bradford high. I started volunteering at Bradford UF extension the summer of 2015, then officially started working there the summer of 2016. My interest initially came from my grandfather's love for the job, I'd come over and he'd tell me about all these exciting new projects involving agriculture he'd been working on with his co-workers; it all seemed so fun I asked if I could come with one day. So here I am two years later learning all about extension and all its very diverse inhabitants and I couldn't be happier.

***Outfitting Your Farm for Mechanical Cultivation & Weed Suppression*** This video provides a great overview of how to choose the tractors and implements that are best suited to your farm. It does not supply everything you need to know but it is a great start!!

<https://www.youtube.com/watch?v=JVtDwQ0NRkc>

***Tractor Action*** This a short, introductory video that introduces the concept of controlling weeds with steel in organic production <https://www.youtube.com/watch?v=rFwUejes9nU>

***Weed Control with Spider Tines in Organic Production*** This video shows how to control weeds mechanically using spider tines and soil aeration with a sweep simultaneously. Videos of weed suppression in pepper, eggplant and southern pea are featured.
